06/20/10 00:00 CST 0 Drought

06/30/10 23:59 CST 0.90M

Northeast Louisiana was quite dry in recent months and has run 2-3 inches below normal on precipitation since March. Most areas have only received around 2 inches of rain each month, although some areas have struggled to get as much as 1 inch. Due to the lack of substantial rainfall, extreme drought conditions began in late June across the parishes. The drought conditions continued into the month of July.

Many roads were flooded in Meridian with several cars stalled and flooded.

A few weak areas of low pressure combined with instability and gulf moisture to produce scattered thunderstorms across the region.

A few storms reached severe limits and produced hail, wind damage, and localized flash flooding.

A few trees were reported dow	n with winds estimated at 60 mph.			

Sufficient moisture and daytime heating led to the development of showers and thunderstorms. Some of the thunderstorms brought some flash flooding and wind damage to portions of central and south Mississippi.

Over four inches of rain was observed. Streets were flooded in Sandersville.

A very warm, moist and unstable airmass triggered a few thunderstorms producing torrential downpours over central Mississippi on June 29th and 30th. Flash flooding was the only severe weather reported during this time.
